We are excited to announce several new Link API Gateway features for API Publishers and API Consumers.

What is changing?

For API Publishers

Mutual TLS
You can now provide consumer authentication for your endpoints with Mutual TLS or OAuth. If you have APIs externalized via Layer7, scheduled for decommissioning in 2020, you can easily migrate your APIs to the Link API Gateway using the self-service UI.

Configurable Timeouts for your API endpoint
You can use the self-service UI to configure Connection Timeouts, ranging from 500ms to 5000ms, and Response Timeouts, ranging from 2000 to 120000ms.

Flexible Rate Limit
You can set the rate limit for your API endpoints anywhere between 10 and 20,000 requests per minute.

Redesigned pages
Pages with tables now display all of the content with appropriate grouping. You can filter the content to make it easier to find what you're looking for.

API Tags
You can now add up to 20 tags to each API. API consumers can use the tags to easily find your API.

For API Consumers

Consuming Mutual TLS endpoint
Each consumer using an endpoint secured by Mutual TLS must be associated with a certificate from a popular, trusted Certificate Authority (CA). Upload the certificate when creating a consumer, or by editing an existing consumer. You can manage your consumer and certificate association using the self-service UI.

Deleting Consumers
You can easily delete unused consumers from the **Consume APIs** screen using the **Delete** button. The Delete button displays only for unused consumers.

Do you have questions?

Refer to our **documentation** or reach out to the Link API Gateway Tier 2 support group via Service-Now for further assistance.
